

Protective Steel Cages

Steel cages designed to protect smoke and fire detectors from vandalism and misuse. Constructed from plastic coated, 9 gauge galvanised steel rod or stainless steel, the cages can cope with the severest of abuse from vandalism or accidental damage.

Use of steel cages is essential where smoke detectors are located in vulnerable areas where vandalism or accidental damage is frequent and the risk of abuse to smoke detectors is severe. A variety of shapes and sizes are available to offer a protection solution to a wide choice of devices and plastic coated versions are available for indoor or outdoor use.

/SS Stainless Steel Finish

Call Point Stoppers

Stopper and Mini-Stopper call point covers have been developed to help prevent false fire alarms without restricting the legitimate operation of the call point. Manufactured from tough polycarbonate, the cover and frame fits over the call point.

An optional integral sounder is available with the Stopper which emits an alarm when the cover is lifted, therefore drawing attention to the area where the alarm was triggered.

Stopper: 197mm H x 105mm W x 57mm D

Mini Stopper: 90mm H x 92mm W x 58mm D

Extinguisher & Exit Stoppers

Our Extinguisher Stopper is a sturdy, tamper-proof, self-contained device that has proven highly effective in helping stop theft, misuse or vandalism of fire extinguishers. The Extinguisher Stopper will leave the extinguisher totally accessible for emergencies and will not interfere in the event of a real fire. It's highly visible 'stop sign' design discourages wrongful use but in the event that the protected fire extinguisher is moved from its normal position, an integral sounder emits a piercing alarm. Easy to install, a deactivation cable is supplied for ease of servicing the extinguisher.

The Exit Stopper is a unique and highly effective way to alert you to any unauthorised exits or entries through any emergency exit door. It can also serve as an inexpensive security device and help prevent theft. If the protected door is opened, the electronic Exit Stopper emits an ear piercing alarm. When the door is closed, a number of reset options are available including an automatic function. A key operated override facility will silence the alarm and allow authorised exits.
