

Electromagnetic Door Holders

DRW Series

Electromagnetic fire door holders are designed to hold open fire doors in any areas where easy access is essential, and can be used in conjunction with any fire alarm system. When an alarm is triggered, power to the door holder is cut allowing the fire door, with its standard closing mechanism, to shut automatically. All Orbik door retainers are designed to comply to the latest requirements of EN61000-3-2, EN50081-1, EN60950 and EN1155.

DRW floor mounted door retainers combine good looks, high performance and economy in one new low profile package. With a flame retardant, low profile ABS plastic body or a robust aluminum fascia plate, each DRW door retainer is fitted with a spring loaded release pin mounted centrally within the electro-magnet.

Our decorative range of door retainers look superb and are available in chrome or brass finishes and are suitable for use in prestigious installations such as offices, hotels and conference centres. The magnet fits directly to a standard single gang electrical back box, which enables the unit to be flush mounted. If required, a surface mounting kit is available in matching finishes, with two 20 mm entry holes and blanking plugs.

The DRX range of floor mounted door retainers is ideally suited to applications where maximum protection is needed against vandalism or accidental damage. It features a rugged cast aluminum housing, a holding magnet with integral ejection pin and a manual release switch. The strong construction of the IP65 door holder makes it ideal for most applications in all types of buildings. The high level of ingress protection also means that this magnet is particularly suited to use outdoors.

The FDG series provides a wire-free solution for legally holding open fire doors in any position. The units are easy to install and improve access for wheelchair users in line with the Disability Discrimination Act. The DRP series of door holders can be used for many different door holding applications. The stand and adjustable head are fabricated from steel to provide a very robust structure. A moulded cover is included to conceal the mounting fixings once the holder is fitted.
